

Scotch Brite™ Discs 3M Clean and Strip

Advanced Clean Strip Products for the Metal Fabrication Industry

- Black clean strip discs HI-DC cleaning and finishing disc with high-performance foam with 12 mm Ø inner hole.
- CG-DC Blue Clean & Strip Discs by 3M cleaning and finishing disc
- 3M XT-DC Purple Clean & Strip Discs cleaning and finishing disc.
- 3M CG-RD Blue Clean & Strip Discs cleaning disc with rigid support.
- XT-RD Discs Purple cleaning and finishing disc with rigid support.
- CG-DB Blue Discs Cleaning and finishing disc with fiber support.
- clean&strip discs XT-DB Purple cleaning and finishing disc with fiber support and Ø 22 inner hole,,.
- Black clean&strip discs HI-DC cleaning and finishing disc with high-performance foam with 12 mm Ø inner hole.

ADDITIONAL INFORMATION

Clean & Strip™ discs are used in various types of industries and businesses. Among its most common applications we can mention:

- Removal of contaminants such as rust and corrosion, small welding spatters, dirt, scale and residue of any kind.
- Removal of previous coatings such as paints and epoxies.
- Cleaning and conditioning before and after welding.

Clean & Strip™ discs are used with portable tools or small bench sanders. These products are available in a wide variety of sizes, are lightweight, and have different degrees of aggressiveness and comfort for working in hard-to-reach areas.

Because Clean & Strip™ products are manufactured with Scotch-Brite™ technology, the “spring” action produced by the disc structure prevents tearing of material and the formation of burrs on the worked surfaces.

The mineral used in these products is 36 grain Silicon Carbide and is supported by an open non-woven nylon mesh covered with resin.

Due to this structure, Clean & Strip™ discs are able to conform to contours, edges and corners to maintain the dimensional quality of the surfaces and deliver a clean, smooth and consistent finish.

| 3M™ Scotch-Brite Blue GP Clean & Strip Disc

||| Constructed with special (anti-fouling) Scotch Brite™ nylon fibers and impregnated with abrasive, the result is a clean metal surface ready to be painted, with minimal effort. Available in different sizes and adapters for all applications and machines
